Tenant Onboarding + Operational User Management

Browser UAT Tutorial and Screenshot Evidence

Doctors Point Diagnostic Center (DPDC)
Bhola Main Branch | BR-BHL-01

UAT date: 02 August 2026 | Evidence set: 34 browser screenshots | Classification: Operator tutorial

This publication uses only live browser evidence. Production-like DPDC company, branch, staff, doctor, and schedule records were verified without alteration. A dedicated UAT account was used for lifecycle tests.

1. Outcome at a glance

The tenant onboarding and user-management journey passed. The readiness engine independently returned 100%, **READY_FOR_FIRST_PATIENT**, and Can declare: true.

Control	Observed result
Tenant context	DPDC / BR-BHL-01
Operational users	19 active users cover required roles
Doctors & schedules	3 doctors; 1 verifier; 2 with published schedules
Diagnostic readiness	15 services, 21 ranges, 4 mapped analyzers, 4 LIS connections
Portal & notifications	Enabled and green
Security	Inactive login denied; Reception blocked from user management

Screen 32 — Operational Readiness dashboard.

2. Sign in with the correct tenant context

Select Doctors Point Diagnostic Center (DPDC), then Bhola Main Branch (BR-BHL-01). After sign-in, confirm the tenant, branch, username, and Tenant Administrator role in the banner before changing configuration.

Screen 01 — Staff sign-in surface; any retained password value is masked.

Screen 02 — Authenticated DPDC tenant-admin workspace and branch context.

3. Verify the organizational foundation

Company contact and branding must be complete. The intended branch must be active. Required departments must cover reception, billing/cash, collection, laboratory sections, result entry, verification, and delivery.

The screenshot displays the 'Company Profile' configuration page within the ABSHealthcareLite Tenant Workspace. The left sidebar shows the 'Operational Readiness' section is active. The main content area is titled 'GO-LIVE / COMPANY PROFILE' and 'Company Profile'. It includes a 'Readiness' tab and a 'Company' sub-tab. The 'Company Profile' section contains fields for Company name, Phone, Email, Website, Address, Tenant logo URL, Invoice footer, Report footer, Footer branding, and Barcode prefix. A 'Save company profile' button is at the bottom right.

The screenshot displays the 'Department Management' configuration page within the ABSHealthcareLite Tenant Workspace. The left sidebar shows the 'Operational Readiness' section is active. The main content area is titled 'GO-LIVE / OPERATIONALS' and 'Department Management'. It includes a 'Readiness' tab and a 'Departments' sub-tab. The 'Department Management' section contains a table with columns: ID, NAME, TYPE, SCOPE, STATUS, and ACTIONS. The table lists various departments such as DP ADMIN, BILLING, DP BILLING, BOOKING/ENTRY, DP BOOKING/ENTRY, CLINICAL PATHWAYS, and DP CONSULT. A 'Create new department' button is at the bottom right.

Screen 11 — Role and permission management surface.

Screen 11 — Role and permission management surface.

5. Create and assign operational users

Enter username, contact details, temporary password, primary role, department, and branch. Enable forced password change for a new user. Use one account per person and apply least privilege.

The screenshot displays the 'Operational User Wizard' form in the ABSHealthcareLite Tenant Workspace. The form is used to create operational users with roles, branches, departments, and status. It includes fields for Username, Email, Phone, Temporary password, Role, Branch, Department, and a checkbox for 'Force password change on first login'. A 'Create operational user' button is at the bottom right.

Below the form, a table titled 'Current users' shows existing operational accounts:

USERNAME	ROLE	BRANCH	DEPARTMENT	STATUS
qbilling	Billing User	BR-BHL-01	---	ACTIVE
qbranchadmin	Branch Administrator	BR-BHL-01	---	ACTIVE
qcash	Cash Collection User	BR-BHL-01	---	ACTIVE
qcollection	Sample Collection User	BR-BHL-01	---	ACTIVE

Screen 12 — Create-user form and assignment controls.

The screenshot displays the 'User Management' table in the ABSHealthcareLite Tenant Workspace. The table lists existing operational users with columns for Username, Role, Branch, Department, and Status. The table is filtered by 'BR-BHL-01' and 'DPDC'.

USERNAME	ROLE	BRANCH	DEPARTMENT	STATUS
qbilling	Billing User	BR-BHL-01	---	ACTIVE
qbranchadmin	Branch Administrator	BR-BHL-01	---	ACTIVE
qcash	Cash Collection User	BR-BHL-01	---	ACTIVE
qcollection	Sample Collection User	BR-BHL-01	---	ACTIVE

Screen 20 — Existing DPDC operational user coverage.

6. Lifecycle controls

Lifecycle testing used only the dedicated account `dp.uat.user.mgmt`. The edit page exposes role, branch, status, force-password-change, and reset-password controls.

Screen 21 — Dedicated UAT account edit surface.

Screen 22 — Account status set to Inactive.

7. Deny inactive login; restore active access

An inactive account was rejected with a generic Invalid username or password message, avoiding account-status disclosure. The account was then restored to Active and could sign in. When the Reception user opened /settings/users directly, the server redirected to /dashboard?error=insufficient-permission.

Screen 23 — Inactive user login denied; password remains masked.

Access restored

After the status returned to Active, the dedicated UAT account could authenticate. Its Reception role still could not open tenant user management.

Screen 25 — Dedicated UAT account reactivated.

8. Doctors, schedules, and appointments

Verify at least one active verification doctor and published schedules. Published doctors must be offered by the appointment workflow. Existing DPDC doctor and schedule records were inspected only.

Screen 28 — Existing verification doctor.

Screen 31 — Published doctor available to appointment booking.

9. Readiness and verification record

Do not declare operational readiness until every rule is green. The UI and independent database verifier agreed on the final state.

Screen 34 — READY FOR FIRST PATIENT.

Verification	Result
Browser evidence	34/34 captured
verify:mod00	PASS — 100%, READY_FOR_FIRST_PATIENT
verify:mod02	PASS — 16/16
verify:mod07	PASS
verify:dpdc	PASS

10. Known gaps and operator checklist

Known gaps

1. Department assignment is available during creation but not on the user edit page.
2. DPDC has one branch, so cross-branch reassignment could not be tested without inventing operational data.
3. Password reset has no visible success receipt or audit reference on the edit page.

Before go-live

Confirm tenant and branch context; complete company branding; verify the active/default branch; verify required departments and roles; give every user a least-privilege role and active branch; require temporary-password change; confirm inactive login is denied; confirm operational users cannot open tenant administration; verify the verification doctor and published schedule; require 100% readiness; never capture passwords.

Bilingual companion

The complete English and Bangla operator tutorial, plus the 34-screen evidence index, is maintained in docs/Business-Journey/J-00-Tenant-Onboarding-and-User-Management.md.
